

## **FISHING POLE HOLDER AND METHOD**

### **ABSTRACT**

A fishing pole holder which allows fishermen and fisherwomen to maintain the ideal fishing line angle while fishing without having to hold his or her fishing pole.

- 5 The fishing pole holder has a holder (1) that is cylindrically shaped and hollow for the acceptance of a handle of a fishing pole (4). A cylindrically shaped and hollow base pole (2) can be fixably or removably attached to the holder (1) at a ninety degree angle. The base pole (2) has a pointed end (3) to allow easy insertion into a ground (5). To use the fishing pole holder, the user simply takes the holder and inserts the
- 10 pointed end (3) of the base pole (2) into the ground (5) at an angle so that the fishing pole holder is leaning away from the water. The user then places the handle of his or her fishing pole (4) into the holder (1).
